Lab 4: SNMPv2 Table Operations

Objective

To practice the SNMPv2 table operations for the aggregate object data.

Background

The three table operations of SNMPv2 are : augmented, dense/dependent and sparse dependent table.

Procedure

- a) Following are tables for base table, abTable and augmented table, augTable.

abTable

abAdEntAddr	abAdEntNetMask	abAdEntBcastAddr
9.96.8.138	255.255.255.192	0
123.45.2.1	255.255.255.0	0
123.45.3.4	255.255.0.0	1
165.8.9.25	255.255.255.252	0

augTable

xyAdEntIfIndex	xyAdEntReasmMaxSize
1	15000
2	12000
3	12000
4	10000

Draw the output table, outTable, after the operation of augmentation of tables has been done to the abTable and augTable.

Column 2 and 3 in the outTable are from augTable.

b) Following are tables for base table, abTable and dense/dependent table, denTable.

abTable

abAdEntAddr	abAdEntNetMask	abAdEntBcastAddr
9.96.8.138	255.255.255.192	0
123.45.2.1	255.255.255.0	0

denTable

xyAdEntIfIndex	xyAdEntReasmMaxSize
1	15000
2	12000
3	12000
4	10000

Draw the output table, outTable, after the operation of dense/dependent of tables has been done to the abTable and denTable.

Column 2 and 3 in the outTable are from denTable.

- c) Following are tables for base table, abTable and sparse dependent table, spaTable.

abTable

abAdEntAddr	abAdEntNetMask	abAdEntBcastAddr
9.96.8.138	255.255.255.192	0
123.45.2.1	255.255.255.0	0
123.45.3.4	255.255.0.0	1
165.8.9.25	255.255.255.252	0

spaTable

xyAdEntIfIndex	xyAdEntReasmMaxSize
1	15000
3	12000

Draw the output table, outTable, after the operation of sparse/dependent of tables has been done to the abTable and spaTable.

Column 2 and 3 in the outTable are from spaTable.

- d) Following are tables for base table, abTable and sparse dependent table, spaTable.

abTable

abAdEntAddr	abAdEntNetMask	abAdEntBcastAddr
9.96.8.138	255.255.255.192	0
123.45.2.1	255.255.255.0	0
123.45.3.4	255.255.0.0	1
165.8.9.25	255.255.255.252	0
165.8.10.138	255.255.0.0	1
165.8.10.240	255.255.0.1	1
192.168.1.134	255.255.0.252	0
192.168.1.238	255.255.252.0	1

spaTable

xyAdEntIfIndex	xyAdEntReasmMaxSize
1	15000
3	12000
5	20000
7	25000

Draw the output table, outTable, after the operation of sparse/dependent of tables has been done to the abTable and spaTable.

Column 3 and 4 in the outTable are from spaTable.
